

Dear Bill:

I am enclosing a check for a one year membership in ATUNC. I have two Apple ///'s, one at home and one at work. I noticed an advertisement for your organization while visitng with family in the San Francisco area this past summer. Although we have an active Apple group in Madison, there is little available for /// owners like myself.

I am very interested in finding a program that would print out disk labels for my Apple /// floppy disks listing the files generated on Word Juggler. I do not have Business basic and assume that would be needed to use the program in the August Newsletter. Do you know of anything else that would do the job? Could I use an Apple][pogram for this purpose? One of my Apple ///'s has a Titan ///+//e card with 128 K and 80 columns in emulation.

You asked about running games and other programs in emulation. My emulation is configured so that it works like an Apple //e. I have never had any trouble getting any Apple][or //e program to work except Apple Logo. I haven't had the time or interest to get to the source of the problem with Logo. I have used the following Apple][programs in emulation:

1. Dollars and Sense (needs 128K and works best with 80 column card). This program alone made the purchase of the Titan card worthwhile. It is a superb finacial program.
2. Print Shop
3. Newsroom
4. Create with Garfield (fantastic cartoon generator)
5. Counting Bee (a wonderful preschool and kindergarten number game)
6. Spelling Bee (wonderful word game program for preschoolers)
7. Master type
8. Microzine Magazine Disk Programs
9. Early Games for young children
10. Wizard of where (another preschool program)
11. Frogger

I hope this information is useful. Thanks for your help.

- Wendy S. Coleman, M.D., Wisconsin

Dear Wendy:

Welcome to ATUNC, good to have you aboard. In answer to your question about disk labels. One way to go would be for you to purchase Business Basic from our Public Domain Software Library (\$3 for disk and \$1.65 for some documentation). Another way would be to check out some of the Apple][magazines and check for disk label programs (I know I've seen them). If anyone out there has other programs let me know. Also thank you for your list of Apple][software.
