

This program allows you to print graphics for A/// or Apple][programs on your A/// in native modes. You can read in Print Shop graphics, rotate, change their size and print it in the middle of your A/// word processor. You control the size, where on the paper, and the orientation.

The Graphics Manager supports the following printers: IDS PRISM, Okidata 92/93, Epson FX-RX-MX, Apple DMP, Prowriter, Imagewriter, Imagewriter II, Fujitsu JX-80, Fujitsu DPL-24, and all printers connected via the Pkaso and Pkaso/U cards.

If anyone has a non-supported printer, please call or write ON Three as Mel can add support fairly easily.

If you have had problems printing graphs you have created with Graph-N-Calc, Business Graphics or PFS Graph, this program will solve the problem. It works as a stand alone program or part of the DeskTop Manager program from ON Three.
