

APPLE /// USERS OF NORTHERN CALIFORNIA

VOL. 2 NO. 6 JUNE, 1985

Q7: Boot from .d2 ?

A7: Just open Apple ///, remove cover from .D1 to get at ribbon connector on top of .D1 PCB, Open .d2 Disconnect .d2 Ribbon connector from top of PCB. Plug .d2 into ribbon originally connected to .d1.

More of a quick swap of drives than a true boot from drive 2.

Helpful in trying to diagnose an Apple /// which otherwise refuses to boot.
