

APPLE /// USERS OF NORTHERN CALIFORNIA  
VOLUME 4 NUMBER 1 JANUARY, 1987  
DO YOU KNOW WHERE YOUR CLOCK IS?

It is a new year and you need to reset your clock. Specifically the year. The day and time roll over correctly, but the year does not change. The change is easy with in System Utilities or Word Juggler.

With System Utilities go from Devices to Time and use the arrow key to go over to the year and make the change. It is automatically saved.

With Word Juggler (Version 2.6 only), hit Enter from the main menu to go into a new or existing file, then hit Solid Apple 1 (SA 1) for the Utilities and pick Reset time from the menu. If SA 1 does not give you a menu, you probably have an older version. I feel that the improvements in version 2.6 are worth paying Quarks high upgrade fee.
